

### **Screening Test Disclaimer:**

The First Step™ Newborn Screening process is a diagnostic tool to be used by qualified physicians to assist them in diagnosis of metabolic disorders. These disorders will be detected in most affected individuals. Under no circumstance, however, can it be guaranteed that the screening process will detect the existence or non-existence of each of the potentially detectable disorders identified, due to factors such as genetic variability, age of patient at the time of specimen collection, quality of specimen, health status of the patient and other variables which are outside the parameters of the screening process.

### **Return Restriction and Refund Policy:**

If NeoGen Labs is informed that the screening test is not to be run, before the specimen is processed, the screening test payment will be refunded. There will be no refund if the specimen is processed for the screening test. Payment will be refunded by Cash, Check or Bank Transfer (NEFT).
